PEOPLE AND TECHNOLOGY – A PERFECT MATCH

Technology to inspire you: understanding – comprehending – applying

ETS DIDACTIC is your partner for in-house and institutional education and training in the professional fields of electrical engineering and metal technology.

Topics such as Industry 4.0, electrical engineering, power electronics, pneumatics, drive technology, automation technology, sensor technology, bus systems, mechatronics, transmission technology and the complete scope of building systems engineering including renewable energies are presented as a training system. With the help of well thought-out learning-oriented hardware and accompanying courseware, the specialist skills are quickly learned, grasped by hands and lead to didactic learning success in a goal-oriented manner.

The service spectrum of ETS DIDACTIC ranges from the provision of didactic hardware, courseware and software to the planning and equipping of the complete training rooms. ETS meets all requirements with practice-oriented workshops on the complete spectrum of technical professions for lecturers, trainers and instructors in a specially built modern training center or online.

Vocational schools, training centres of the ICC, Chamber of Crafts or the industry, polytechnics and universities are among the long-standing customers of ETS DIDACTIC.

Welcome to ETS DIDACTIC

ETS DIDACTIC is the pioneer and market leader in the development, manufacture and sales of electrical, automation and mechatronic workstations for training and instruction.

ETS DIDACTIC counts among the leading international manufacturers in the market environment. Located in Kinding, in the beautiful natural reserve of Altmühltal – high-quality products and solutions are developed and manufactured for you.

In the training centre in Kinding, the focus is on the practical application of the systems and fast learning of new technologies by the customers.

The knowledge, experience and the above-average personal involvement of the motivated employees of ETS DIDACTIC are vital factors for the company's efficiency.

MADE IN GERMANY

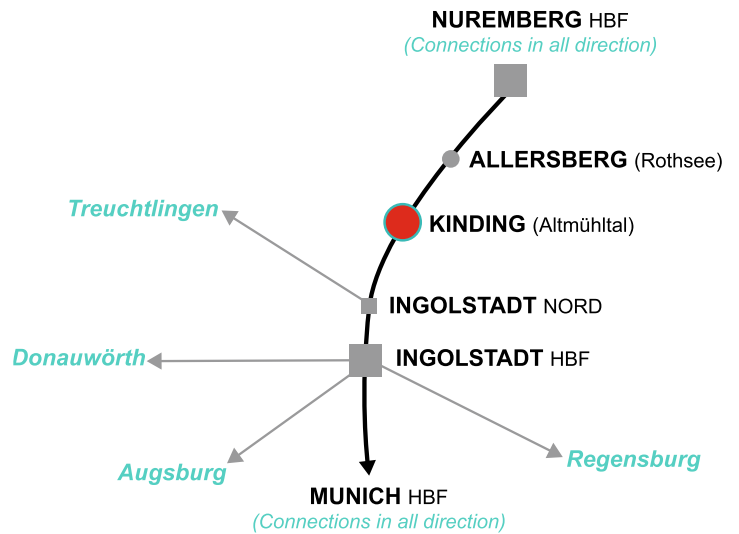

Visit ETS in the Valley of River Altmühl

Welcome to Germany - Bavaria

The Altmühltal Nature Park is one of the largest in Germany and offers a thousand ideas for families, history fans, cultural discoverers and nature lovers.

You can travel to our workshop in Kinding-Haunstetten by train. The regional train station Kinding/Altmühltal is located directly on the ICE route between Nuremberg and Munich. The regional express trains of Deutsche Bahn stop every two hours. The journey from Kinding to Ingolstadt takes 17 minutes, to Munich 1 hour 15 minutes and to Nuremberg only 27 minutes.

Local cab companies are available to take you from Kinding to Haunstetten. We will be happy to assist you with the organization.

Kloster Weltenburg

Naturpark Altmühltal

APPROACH AND ROOM CONCEPT

To plan a custom-made room concept with you, we proceed in the following steps:

- › A good room concept is based on professional advice. The technical consultants of ETS DIDACTIC are pleased to support you in the local planning phase. Benefit from their technical expertise and experience.
- › Planning a room concept is more than selecting the furniture. Each room concept is adapted and developed for the local requirements of the customer.
- › Taking into account the learning contents an equipment list can be set up. As soon as the extent is defined, the storage equipment is optimised and designed.

PEOPLE AND TECHNOLOGY – A PERFECT MATCH

Didactic and Technology Result in the ETS-Concept

Compact Boards

- › Their didactical concept makes our training systems in A4 format outstanding.
- › The photorealistic design of their front panels with graphics, pictures, connection details or warning messages assist and guide the experiments - cognitive didactics. Due to the graphics, users comprehend and remember the technologies more easily.
- › The systems can be mounted in an A4 frame or placed directly on a table.

Experimental Boxes

- › Construct your own experiments. Beside the wiring, the arrangement of the components is focused. With the experimental boxes it's possible to practice basic circuits as well as complex installations
- › Always close to practice, fast and safe!
- › Wide range of industrial components.

BST®-BuildingSystemsTrainer

- › The BuildingSystemsTrainer® is a mobile training system that can be taken from one classroom to another and then is ready for use within some minutes.
- › Beside our laboratory equipment with the experimental boards, these flexible training systems represent an independent product line covering many topics as e.g. the VDE protective measures according to VDE 0100 or the KNX building communication sector, communications technology and renewable energies, SmartBuilding and internet-of-things.
- › Boards can also be integrated in the BuildingSystemsTrainer®

WORKSHOPS WITH ETS

Always up to Date – Training at the Highest Level

› Train the Trainer – workshops for teachers, trainers and lecturers in the field of electrical engineering, mechatronics and metal technology.

› Learn more about the management and the application of various technologies with the support of the ETS trainers. Find out more about the didactic concept and learn to teach the material quickly and safe.

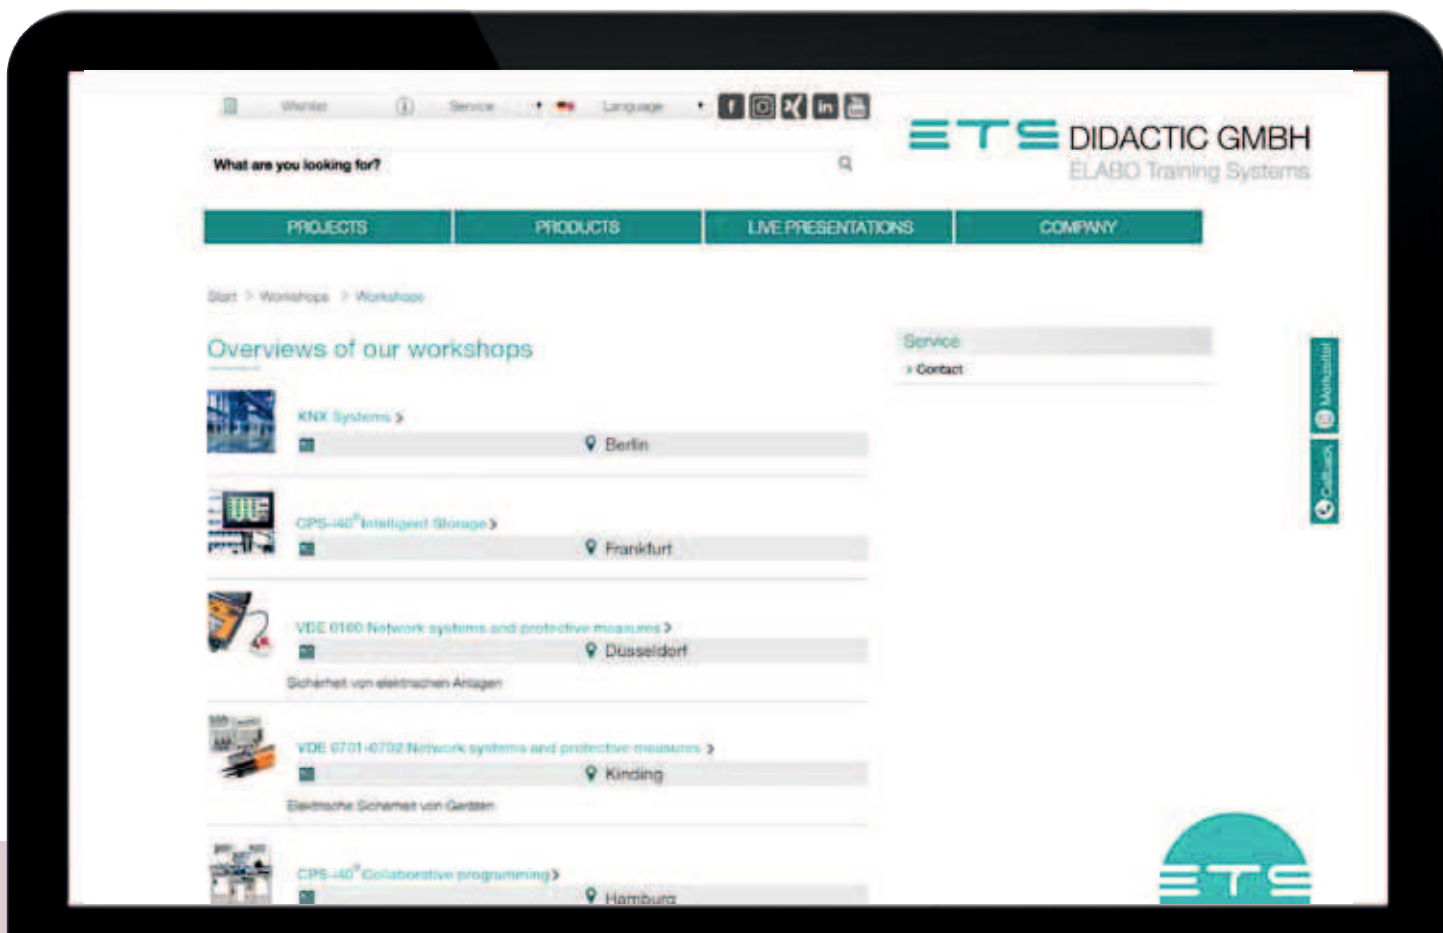

› ETS offers a perfect seminar for all groups of products and topics of technical education. Scan the QR code to subscribe in a workshop:

KNX HEATING CONTROL

Cooling and Heating with KNX

1

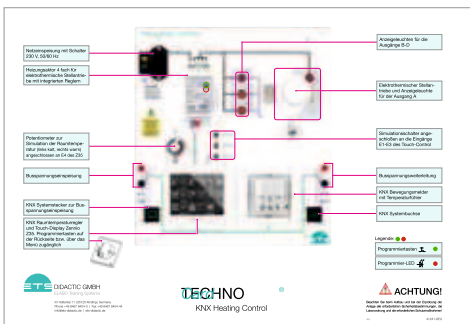

Learning objectives

- › Move to correcting variable, position and forced position
- › Test heating and cooling function
- › Parameterize comfort mode and night setback
- › Testing frost and heat protection and standby operation
- › Commissioning and troubleshooting
- › Parameterize 2-point control
- › Parameterize continuous control
- › Parameterize integrated controllers

Technical data

- › 1 Electrothermal actuator for 2-point or PWM control
- › 3 Simulation switch
- › KNX motion detector with integrated temperature sensor
- › Touch room controller with integrated thermostats
- › KNX heating actuator with integrated controller

VISUALIZATION

KNX IoT Visualization Server

1

Learning objectives

- › Clearly display the operation states of the consumers in a building on a Windows PC, tablet or a smartphone (Android or iOS)
- › Central monitoring and operation of components
- › Create visualization pages
- › Visualization of states or object values
- › Creation of operating pages
- › KNX coupling to IoT
- › External system integrated

The visualization server offers following possibilities

- › Operating the KNX system
- › Observing the KNX installation
- › Alarm handling
- › E-Mail notification
- › Monitoring (e.g. via webcam)
- › Data archives
- › Calendar program
- › Use of own images
- › Full touchscreen support

Technical data

- › KNX connection
- › Network connection
- › Internal power supply unit
- › USB connection
- › Mains voltage connection

SMART LIGHTING

INTELLIGENT BUILDING CONTROL

SMART HOME LIGHTING SET

Intelligent lighting control

1

The Smart Home lighting set

consists of intelligent LED lamps. The set shows what is possible and will be possible in the future with digitalization of light. By means of iOS or Android devices, the illuminates can be controlled and designed. For example, you can create a multi-colored room ambience, create light recipes for relaxation, concentration, reading or vitalization and let yourself be woken up in the morning by a sunrise timer. The system can also be linked to other devices and applications.

Learning objectives

- › Commissioning of smart light sources
- › Integration into external systems
- › Color and scene control
- › Networking of the illuminants and controls
- › Set up network participants

Technical data

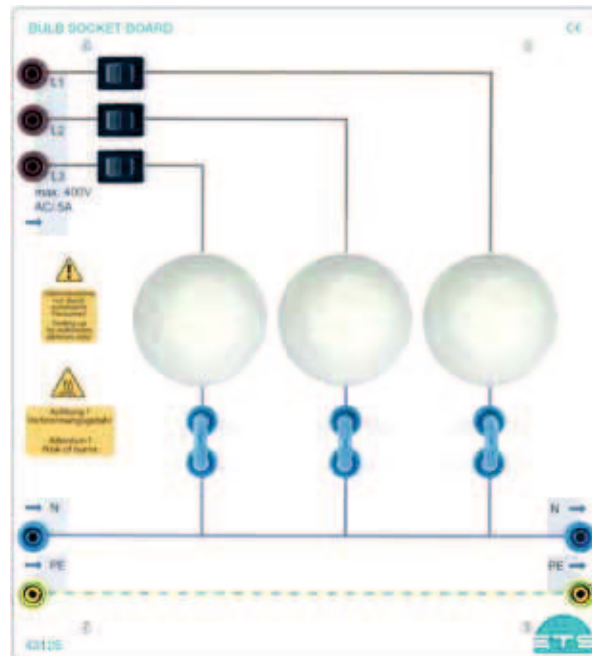

Consisting of:

- › Lan ZigBee Bridge on board
- › LED illuminant white (E27)
- › LED illuminant turnable white (E27)
- › LED illuminant RGB (E27)
- › Power supply for Bridge

No.	Designation	Order No.
1	Smart Home Lighting set	41026
2	Bulb Socket Board	43126

BULB SOCKET BOARD

Optional accessories

2

Technical data

Consisting of:

- › Three consumer sockets (E27)
- › Power supply via 4mm safety sockets, for each consumer individually
- › 3 ON/OFF switch
- › Operating voltage/frequency: 230V; 50Hz

WEATHER

WEATHER SENSITIVE BUILDING CONTROL

SPRING SENSOR TECHNOLOGY

KNX Weather Station

1

Learning objectives

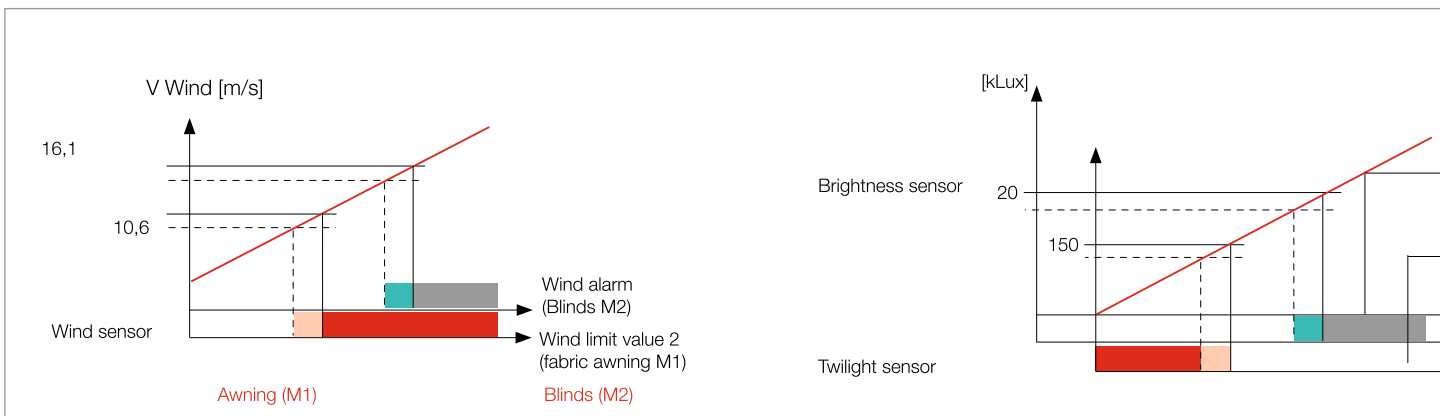

- › Collection and evaluation of weather data
- › Temperature monitoring
- › Evaluation of brightness e.g. for constant light control
- › Brightness dependent control of the lighting
- › Wind monitoring e.g. for the control of blinds
- › Time recording via DCF 77 and forwarding to the bus
- › Logical interconnection of signals
- › Facade control of blinds or roller shutters
- › Evaluation of rain alarm

Functions

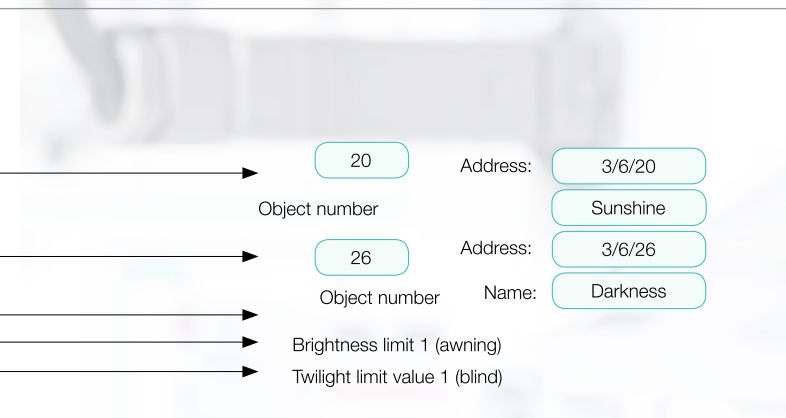

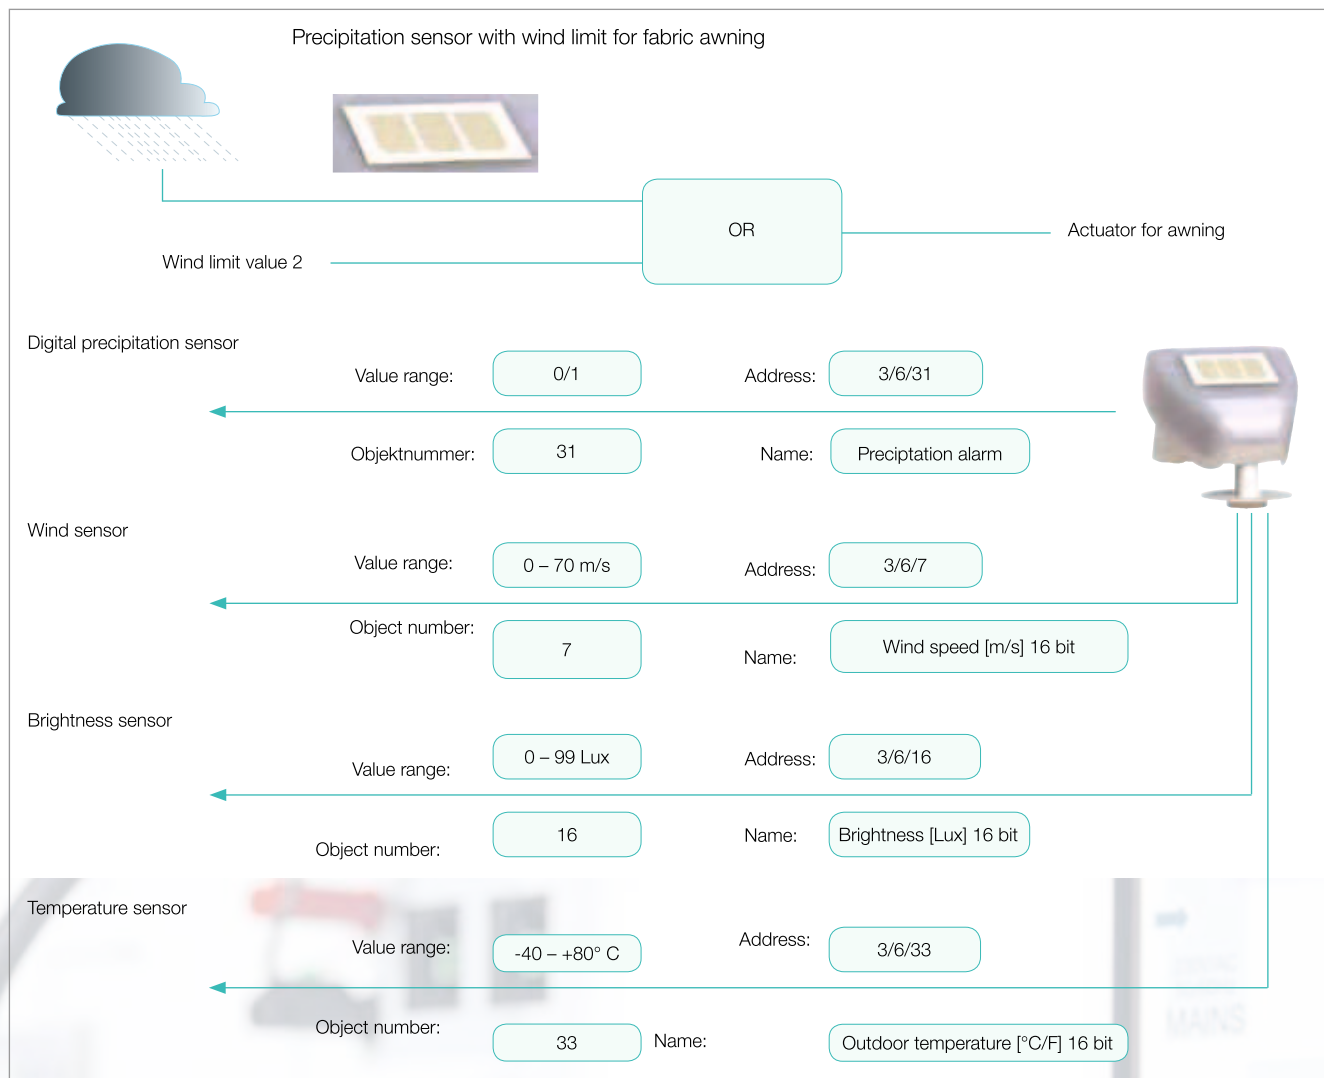

Universal KNX module "Weather Station" with the following functions:

- › Rain sensor
- › Wind sensor
- › Temperature sensor
- › DCF 77 receiver
- › Light sensor
- › Facade control
- › Logic function/timer
- › Different limit values can be set for each function

No.	Designation	Order No.
1	KNX Weather Station	41022

Evaluation of the different sensors

SUN PROTECTION

Blinds Board

1

Technology Model KNX Blinds

Experimental board in DIN A4 teaching board format. Blind mounted on a board for use in the experimental frame. The connection is made to a standard 230V blind or shutter actuator.

To teach the functions:

- › Blind drive
- › Slat adjustment
- › Positioning
- › Security

Technical data

- › Operating voltage 230 V AC 50Hz
- › Connection to blind socket with connection cable approx. 1 m
- › Dimensions l x h x w:
532 x 297 x 120 mm

Execution

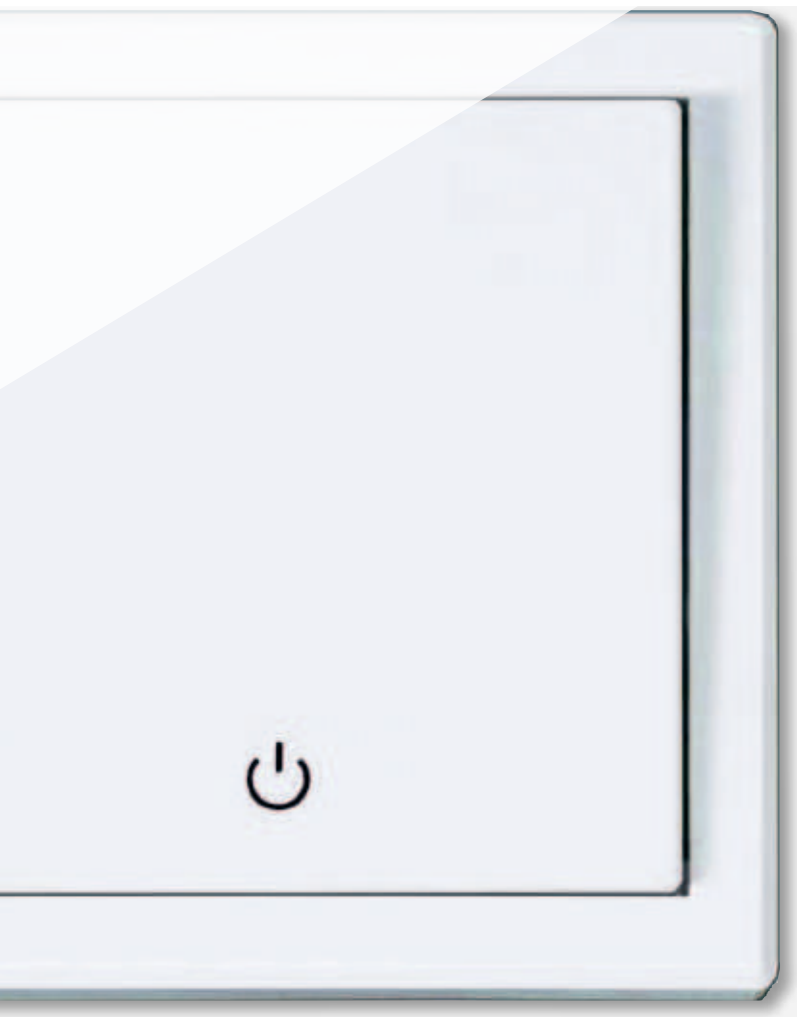

Board with photorealistic, four-color front panel design. Colored line display according to color code. The board surface is scratch-resistant due to special coating. Didactic standard marking with operating instructions and connection options make commissioning easier for the user.

No.	Designation	Order No.

PARAMETRIES OF LINE / AREA COUPLERS

KNX NETWORK

KNX / LINE Backbone IP Coupler

1

Learning objectives

- › Insert line / area coupler
- › Parameterization of line / area couplers
- › Create filter tables
- › Evaluate routing counter content
- › Commissioning and troubleshooting
- › Lien area coupling via IP
- › Programming via IP
- › Parameterize KNX Secure
- › Parameterize KNX Secure and put it into operation

Technical data

KNX system line / area coupling consisting of the following components:

- › Power supply KNX
- › Two line / area couplers KNX Secure
- › IP Router KNX Secure
- › Touch sensor with LCD display

No.	Designation	Order No.
1	KNX / LINE Backbone IP Coupler	41021

COUPLING LINES VIA ETHERNET

Commissioning via LAN / WLAN

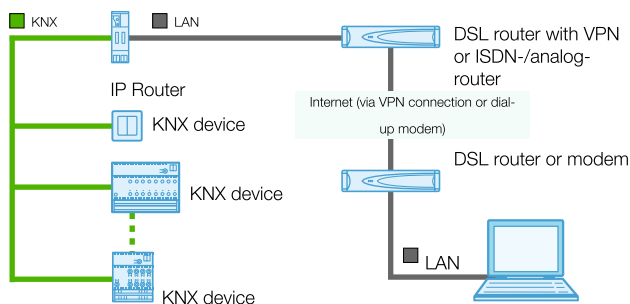

Procedure

Connect the IP router to the KNX bus. Connect the WLAN router to the IP router via the Ethernet cable. Now you can go with notebook and the ETS to the individual rooms.

Advantages

- › Wireless KNX commissioning via WLAN
- › Free movement in the building
- › Commissioning by only one person possible

Remote access via Internet (DSL)

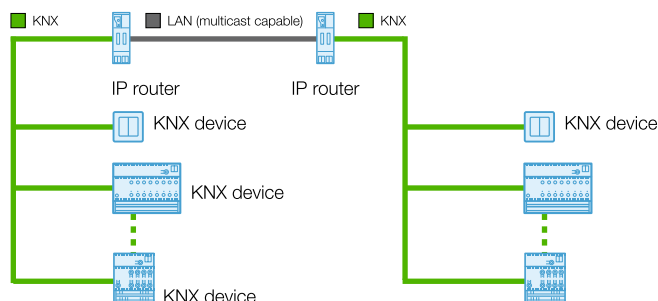

Procedure

1. connect IP router to the KNX bus
2. connect IP router to LAN
3. configure VPN-DSL router or dial-in router

Advantages

- › Parameters can be changes quickly by remote access
- › Cost reduction through remote access (no need to travel)
- › Guarantee of data security

Coupling lines via Ethernet (LAN)

Procedure

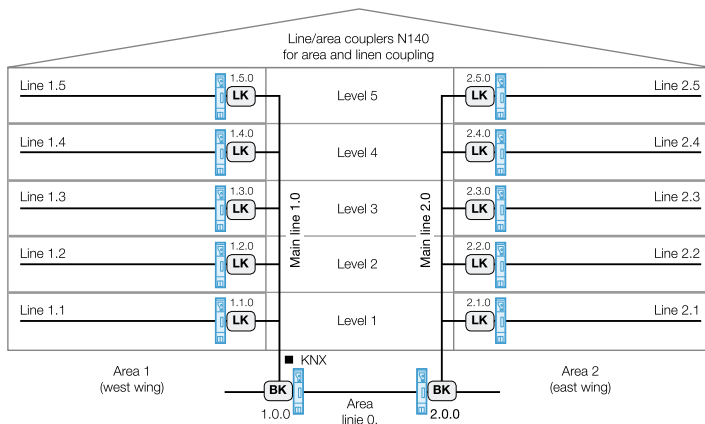

1. connect IP router to each KNX line (instead of a line coupler)
2. connect IP routers via multicast capable LAN
3. Operate each IP router like a "conventional" line / area coupler with the ETS5

Advantages

- › LAN as main and area line
- › Data transmission over longer distances possible
- › Use of existing data networks and components (LAN)

LINE COUPLER

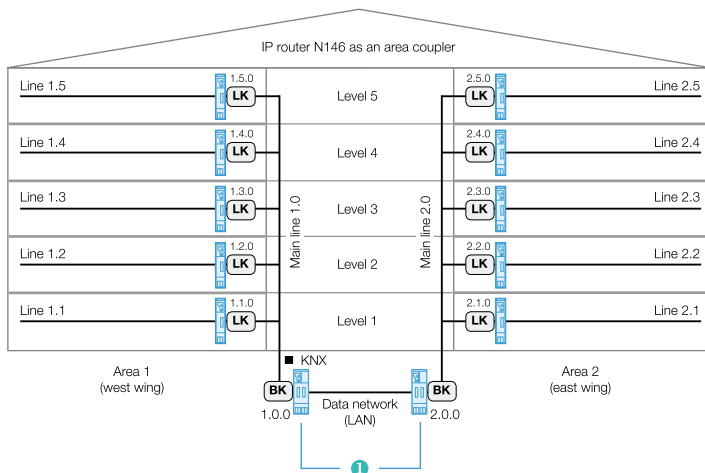

Classical Topology

In the classical topology, all the line and area couplers are traditionally configured as KNX couplers.

This topology is proven and used extensively. The bus line lengths are mostly limited to one building.

Modern Topology

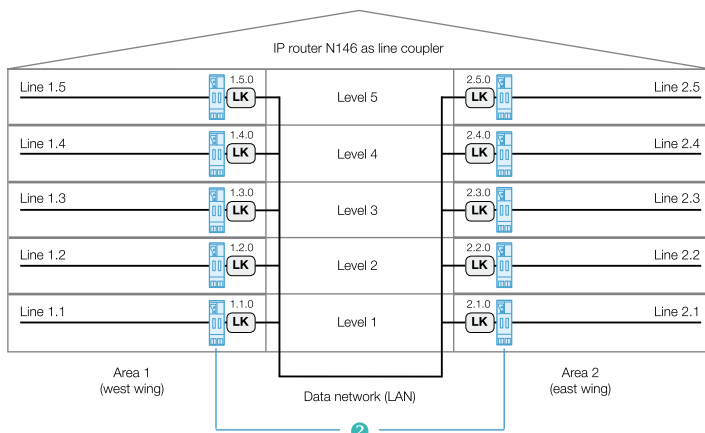

In this modern topology, the area couplers are replaced by IP routers 1.

Owing to the use of standard network components, the connection of e.g. two parts of a building is not limited to bus line lengths.

Even other media like fibre optic cables or W-LAN can be employed to couple to remote buildings and to exchange group address telegrams.

Innovative Topology

In innovative topology, all the line couplers are replaced by IP routers 2.

The use of area couplers is not necessary any more. This configuration allows connecting every individual floor via Ethernet (LAN) and using existing LAN networks.

Moreover, through the correct configuration of the IP router, large projects can be commissioned more clearly and easily in the form of smaller individual projects.

An exchange of group address telegrams is possible despite the division into individual projects..

Line/Area Coupling

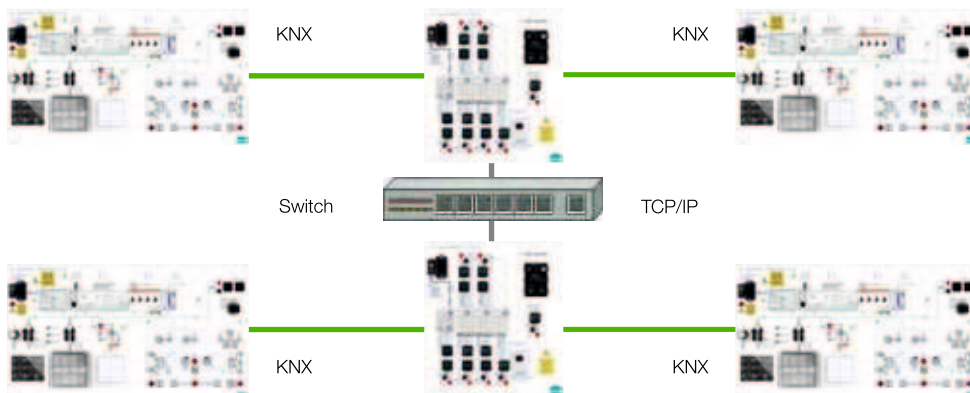

Use of KNX line / area couplers

Commissioning via LAN

Use of KNX line / area couplers and IP router

Area Line via TCP/IP

Use of KNX line / area couplers and IP router

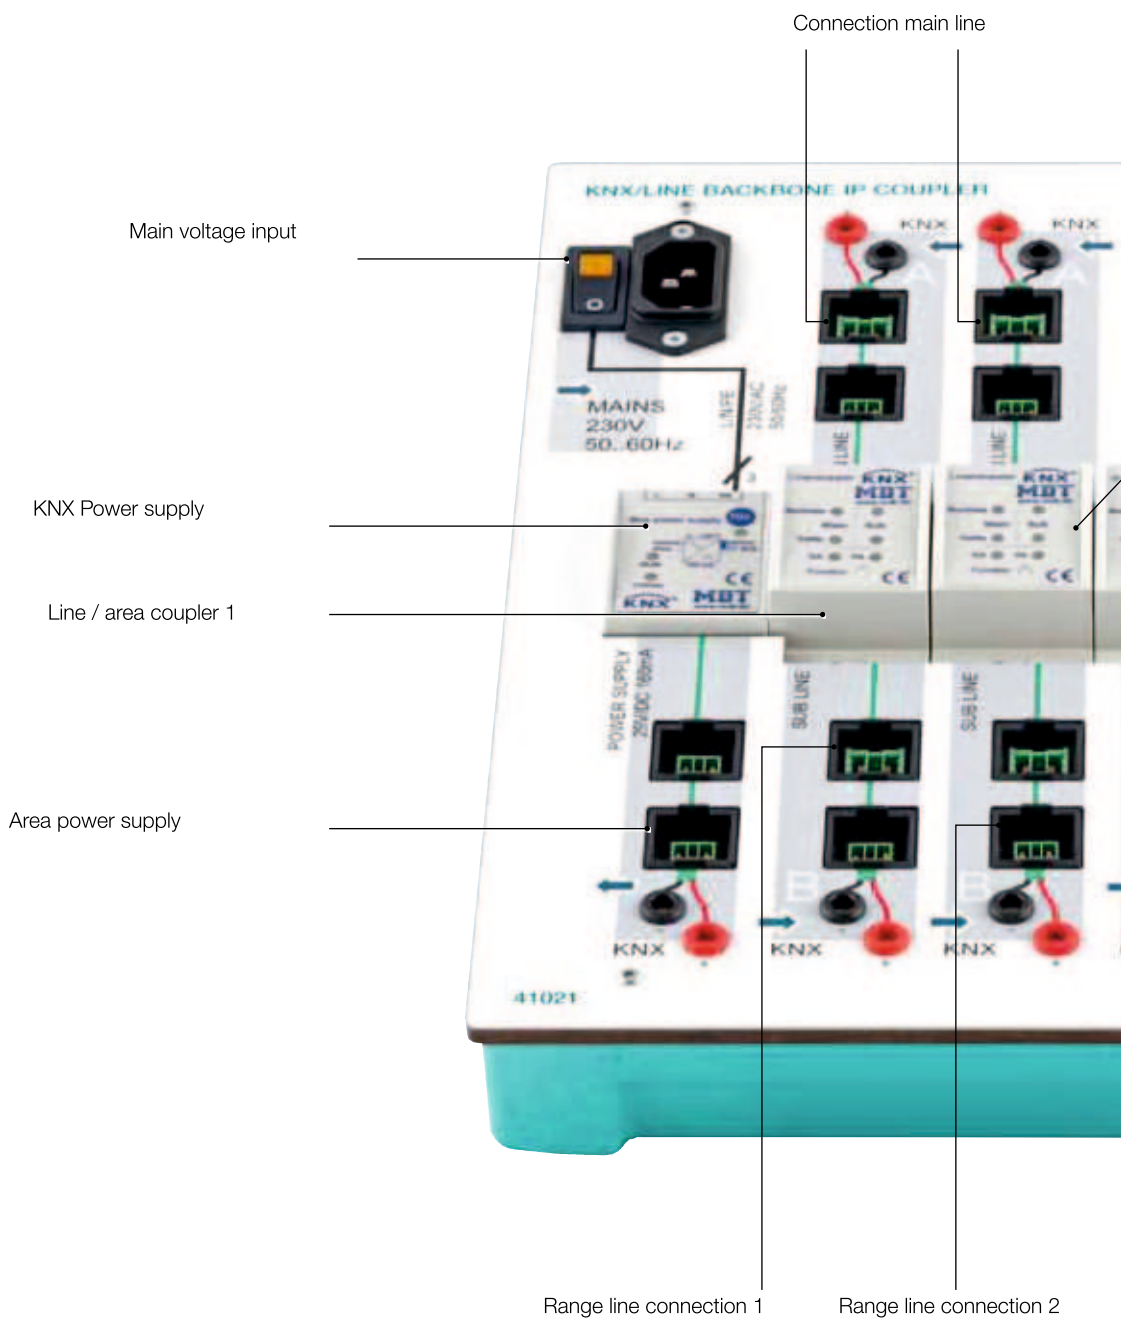

Line Coupler via TCP/IP

GATEWAY DALI LIGHTING CONTROL

KNX DALI Gateway

1

Learning objectives

- › Project planning of KNX systems
- › Commissioning and troubleshooting
- › Commissioning of a DALI bus system
- › Integration of the DALI bus system into a KNX system
- › Documentation and maintenance

Functions

- › Time functions like:
 - Time switch operation
 - Night operation
 - Warn before switching off
- › Dimming
 - Brighter/darker
 - Brightness limitation
 - Adjustable dimming time
- › Switching
 - On/Off
 - On/Off via dimming
- › Control of Tunable White luminaires (DALI DT8)
- › Status
 - DALI short circuit
 - DALI power supply
 - Status outputs
 - Status EVG

Technical data

- › DALI interface for the integration of up to 64 DALI devices
- › DALI bus voltage: approx. 19 V DC
- › KNX bus connection
- › Main voltage: 110 – 240 V AC 50 / 60 Hz
- › All inputs and outputs are connected via safety sockets (2 mm)

No.	Designation	Order No.
1	KNX/DALI Gateway	41226

DALI DIGITAL ADDRESSABLE LIGHT INTERFACE

What is DALI?

DALI is an independent multi-master system (several control units in one bus system). It can operate as an autonomous lighting management system and can also be connected to a higher-level building management system. DALI works as an addressable, bidirectional communication management system in which control devices receive feedback from the components of the system. The DALI protocol was internationally standardized in 1999 in IEC 62386. DALI is an open standard for LED control gear and ballasts. Switches and sensors are defined in the DALI-2 standard.

DEVICE TYPE - DT

In the DALI standard, devices are divided into nine different types:

- › DT0, DT2 and DT3 describe fluorescent and halogen lamps
- › DT4 is used for phase dimming of 230V luminaires e.g. incandescent lamps and retrofit LED lights
- › DT5 are signal converters that convert DALI signals into convert analog dimming signals e.g. 0-10V
- › DT6 is used for single color LEDs - 1 channel
- › DT7 is the pure ON/OFF function e.g. relay modules
- › DT8 is used for color management
 - Tunable White and RGB / RGBW

CONSTRUCTION OF A DALI SYSTEM

A DALI system includes the following components:

- › DALI bus supply: Each DALI circuit needs a bus supply
- › Control devices: These are devices that send DALI commands and thus control operating devices (e.g. key couplers, rotary dimmers, touch panels and many other control elements).
- › Control gear: DALI ballasts and actuators (e.g. DALI LED dimmers) which can be adjusted based on stored parameters and received DALI commands operate a light source accordingly. The simplest DALI circuit thus consists of a device for the DALI bus supply, a control device that sends commands and an operating device that receives and executes the commands.

COMMISSIONING AND CONFIGURATION OF THE DALI BUS

With the PC program DALI Cockpit and a DALI USB interface a DALI system can be addressed and configured.

ADDRESSES, GROUPS AND SCENES

An operating device can be controlled by means of DALI commands. The effective range of a DALI command is defined by the target address contained in the command. A distinction is made between individual addresses, group addresses and broadcast (entire DALI bus). Groups: Commands to groups can be used to switch and dim entire areas together. Up to 16 groups can be created in the DALI system, each DALI device can belong to one or more groups. Scenes: Each DALI device has a memory for 16 scenes. A DALI scene is an operating state, e.g. dimming value or color adjustment of a luminaire. The scene call can be sent to the device directly, to a group or to the entire DALI bus (broadcast).

DALI FACTS

- › up to 64 addressable DALI control gears
- › up to 16 DALI groups
- › up to 16 DALI scenes
- › DALI bus voltage: 12V to maximum 22.5V (standard 16V)
- › DALI system current: <250mA
- › Data transmission speed: 1200Baud (asynchronous interface)
- › Cable length up to 300m (with 1.5mm² conductor cross section), resulting from the permissible voltage drop on the DALI line of maximum 2V.

INTEGRATION OF DALI

Integration into KNX systems is possible via a DALI/KNX gateway. For control and monitoring, DALI systems can be connected to a superordinate building management system (BMS).

L1

FAN SPEED

WEATHER STATION

A weather station module featuring a fan speed control knob, a green and red indicator light, and a red L1 indicator. A label 'WEATHER STATION' is visible. A green line traces a path through the module.

Warning symbol: High Voltage (Yellow triangle with lightning bolt)

MULTIFUNCTIONAL UNIT CONNECT (100V 50/60Hz)

A large multifunctional unit with a warning symbol, a digital display, and various control buttons. A label 'MULTIFUNCTIONAL UNIT CONNECT (100V 50/60Hz)' is visible. A green line traces a path through the unit.

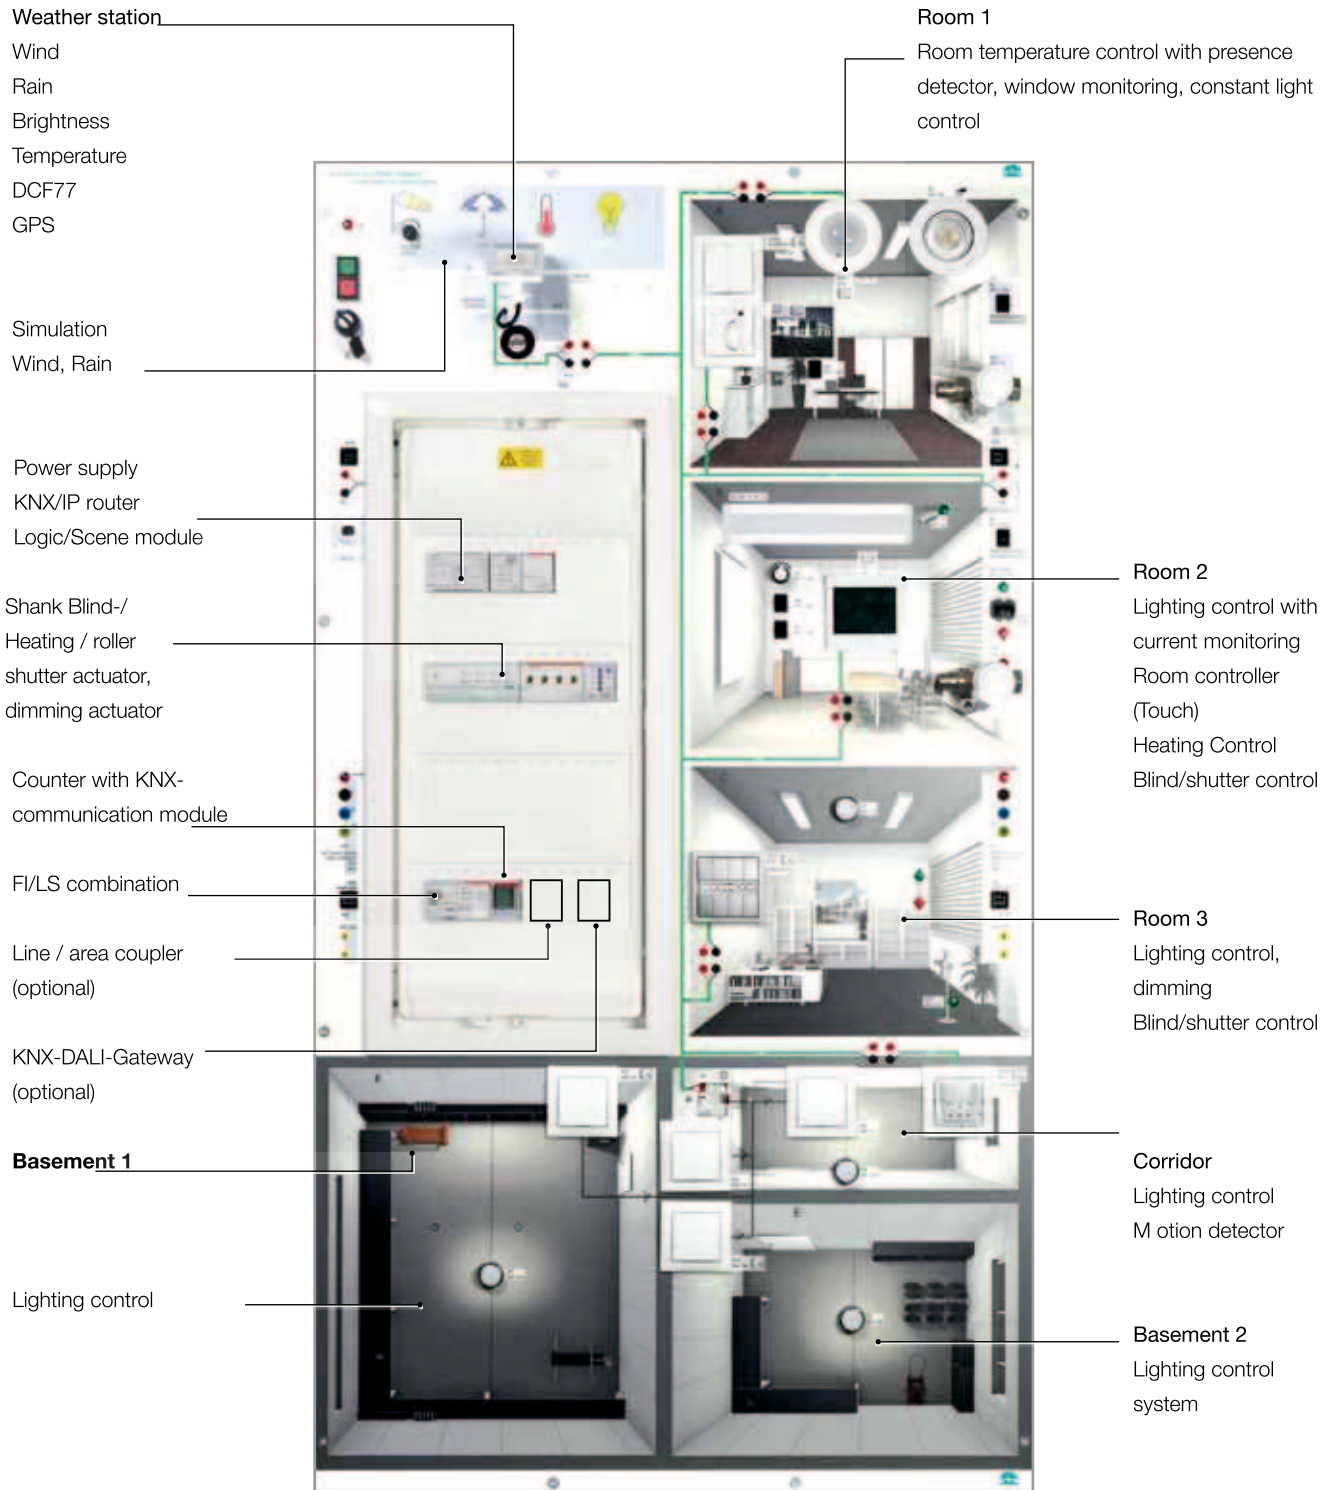

KNX BST®

COMPACT COMPLETE MOBILE

KNX INSTALLATION TECHNOLOGY

BST® Building Systems Trainer

BST® Building Systems trainer Installation Technology

Target group

- › Electronics technician specializing in energy and building services engineering (EFEG)
- › Electronics Technician for Building and Infrastructure Systems (EGI)
- › Electronic Technician for Industrial Engineering (EBT)
- › Technical college for technology
- › Master school

Learning objectives

- › Planning and configuring of KNX systems
- › Commissioning and troubleshooting
- › Extension of existing systems
- › Documentation and maintenance
- › Networking of existing KNX systems
- › Optional use of line/area couplers

Technical Features

- › Rooms can be activated individually
- › Various designs of KNX participants
 - Rail-mounted devices
 - Flush-mounted devices
 - Room automation box
 - Control and display devices
- › Many manually operated devices
- › Realistic arrangement of the components

Advantages

- › Saving of expenses (integrating fundamentals and complex project in a single device)
- › Flexible use (movable)
- › Fast training for trainers (didactically prepared documents)
- › Realistic assembly of components

Training stand be equipped on both sides!

No.	Designation	Order No.
1	BST® KNX Technology	43541
2	Training stand BST® 1800	43501

PROJECT

KNX Project: Dimming

1

Learning objectives

- › Switching ON/OFF
- › Dimming (relative and absolute) 0 % – 100 % of the adjustable range
- › Continuous dimming value / direct switch-on
- › Integration into a scene control
- › Feedback of the output status and output value via the bus in case of changes
- › Commissioning and troubleshooting

Technical data

Set of circuit components mounted on grid wall consisting of:

- › Small distribution board
- › RCD switch 40 / 0.03 A, 4-pole
- › Circuit breaker type B10A, 1-pole
- › Universal dimming actuator 2 x 300 W
- › 2-fold push button sensor with bus coupler and surface-mounted housing
- › 2-fold push-button interface with series button
- › Incandescent lamp E27
- › Electronic ballast for halogen lamps and surface-mounted lamp
- › Scene and logic modules
- › Set of KNX system cables with branch and connecting cable
- › Set of wiring and distribution accessories

No.	Designation	Order No.
1	Project – KNX dimming	41012

Dimming by Universal Dimming Actuators

Sinusoidal voltage

230 V 50 Hz

Phase angle control, leading angle

Voltage progression at the load

Phase angle control, trailing edge

Voltage progression at the load

Dimming by means of universal dimming actuators

Connection of an incandescent lamp load to the universal dimming actuator

PROJECTS

KNX Project Heating Control

1

Learning objectives

- › Moving to controller output and positions, moving to priority positions as well as finding out the maximum position
- › Heating and cooling functions as well as 2-step heating with basic and additional phase
- › Comfort mode and night reduction mode
- › Testing frost and heat protection as well as stand-by mode
- › Commissioning and troubleshooting

Technical data

Set of circuit components for heating control mounted on grid board consisting of:

- › Electromotoric actuator with 2 binary inputs and 5 LEDs for position indication, mounted on heating valve
- › 2 Electromotoric actuators for 2-point or PWM control
- › 2 Window contacts
- › Presence detector, 2-channel KNX with mounting box
- › Room temperature control with bus coupler
- › Room temperature control with touch LCD Display, bus coupler
- › KNX heating actuator with integrated controller
- › Set of KNX system cables with branch and connecting cables
- › Set of wiring accessories

No.	Designation	Order No.

5	KNX Heating Control – Student Manual	41268CD-DENG
6	TECHNOCard® Project Heating	41218-DENG

Heating Control Board

Technical data

- › Electrothermal actuator for 2-point or PWM control
- › 3 Simulation switch
- › KNX motion detector with integrated thermostats
- › Touch room controller with integrated thermostats
- › KNX heating actuator with integrated controller

Information about KNX heating control can be found on page 24.

TRAINING PACKAGE SMART HOME MANAGER

Controller with PLC Functionality and Innovative Web- / IT-Technology

1

Learning objectives

- › Designing energy management systems
- › Visualization of energy systems and their energy flows
- › Installation and commissioning of measuring, control and regulation systems
- › Integration of various bus systems in a management station
- › Maintenance and service of building-integrated automation units

Technical data

- › Controller with SPS functionality and innovative web- / IT technology
- › Digital inputs DC 24 V
- › Digital outputs DC 24 V / 0,5 A
- › Processing time: 0,3...1,5 µs
- › Timer
- › Working memory 1 MB
- › Flash memory 2 MB
- › Flash memory 128 MByte with BACnet Firmware
- › USB interface for programming
- › Ethernet interface
- › Simultaneous use of Ethernet interface for different protocols is possible.
- › RS232 interface
- › RS485 interface on SubD 9pol.
- › RS485 interface on terminal
- › KNX/IP interface
- › DALI master with power supply for 64 DALI devices
- › 5 Port Switch
- › 5 free slots for extension with interfaces or I/O modules
- › Up to max. 13 communication interfaces mounted on: Field Bus Professional Board 70047
- › Integrated power supply 24 V DC / 4.5 A
- › 16 digital inputs, 16 digital outputs 24 V DC
- › Si sockets, 4 mm, for digital inputs and outputs
- › Simulation, pushbutton - / Rast switch for digital inputs
- › Simulation components with: 8 Di, 4 Ai, 8 Do, 2 Ao
- › Simulation field for analog processing
- › System interfaces Sub D 25-pole
- › Terminal for external consumers
- › Short-circuit protection of digital outputs

Courseware

Printed and digital

Content of Manual

- › Fundamentals
- › Programming methods in Saia PG5® Core
- › Commissioning of basic controller
- › Recording of consumer data of energy counters
- › Lighting control and visualization
- › Lighting control via visualization
- › Recording of consumer data via Modbus TCP energy measurement instruments
- › Connection of a KNX installation
- › Connection of a DALI installation
- › Coupling to BACnet

LOGO!

PLC Board 230 V with LOGO! / KNX Module

1

Learning objectives

- › Connecting logic modules and testing basic functions
- › Implementation of circuit diagrams in function-plans
- › PC programming, visualization and documentation of applications

Functions

- › Integrated display panel with backlighting and operating panel with buttons
- › Memory EPROM for switching program and internal set values
- › 12 inputs
- › 8 relay outputs 10 A max.
 - 10 A with resistive load
 - 3 A at inductive load
- › 8 integrated timers
- › 12 pushbuttons / switches for input simulation

QUALITY IS THE MEASURE OF ALL SUCCESS

Inspiring Technologies

ETS DIDACTIC GMBH is a symbol of high quality and outstanding flexibility. This means that ETS DIDACTIC products are convertible, they can – thanks to the modular conception and the versatile range of accessories – be quickly and efficiently matched to changed requirements and extended nearly without limits.

Our high quality standards refer not only to the products from ETS DIDACTIC, but especially also to the quality of the training that customers achieve thanks to the use of ETS DIDACTIC products. And in this, we also include the process quality: ETS DIDACTIC supports procedures during the training that are as problem-free as possible.

The solutions offered by ETS DIDACTIC can be matched to individual customer requirements to a great extent. Customers of ETS DIDACTIC are supported and accompanied in the successful implementation of their training objectives by a comprehensive range of services.

PLEASE CONTACT US

We are always ready to assist you

Linda Johansson
Service Center

Monday to Friday from 7.45h to 16.30h

Phone: +49 8467 / 8404-0

email: sales@ets-didactic.de

We accompany you and are at your side with active advice. Whether you need information, or some advice in advance of making an investment, or have questions regarding the daily use of the products:

Customer-oriented solutions

- › Presentation, product demonstrations and on-site consultancy
- › Support in the selection of educational systems according to the syllabus requirements
- › Matching of the training systems to customer requirements
- › Working out room concepts
- › Designing ergonomic workstations

Experience

- › Comprehensive range of innovative products
- › Systems and solutions from our own (in-house) production
- › Development and design, technical training systems
- › Quality right from the consultancy up to delivery and onward
- › Trainer workshops / In-house training / Webinars
- › References world-wide
 - Industrial educational institutions
 - Vocational schools / technical schools
 - Chambers of crafts
 - Technical colleges / Universities

We support you

- › Installation and commissioning of the systems on-site
- › Technical support
- › Warranty and repairs
- › Instruction and training
- › Further education, training, seminars
- › Comprehensive product documentation
- › Courseware for instructors and trainees
